Turn Operational Data into Actionable Intelligence

Move beyond static reporting by transforming complex business data into clear, explainable answers, recommendations, and performance insight with AI Analyst. Built on CAMP Aviate Data Lake, it combines a high-performance data foundation with an intelligence layer across ERP, financial, operational, and market data—delivering validated answers in the most useful format for decision-making.

What It Does?

Ask anything

No predefined questions or rigid menus. Phrase your question however it naturally comes to you — complex, layered, or open-ended.

Agents get to work

Each question is broken into focused tasks. Dedicated agents fetch, analyze, validate, and synthesize findings in parallel.

Findings are validated and combined

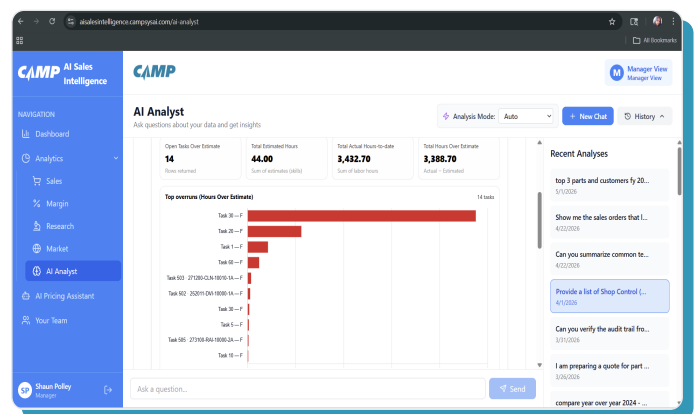

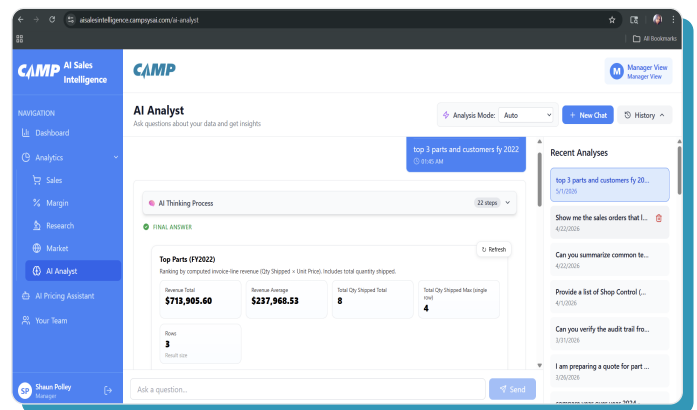

Agents cross-check results before merging them into a single coherent answer — with source context attached.

Refine and drill down

Iterate on results, adjust inputs, and explore further. Drill into anomalies, filter by segment, or reframe the question, without losing context.

Save, share, and manage insights

Save reports, access updated data at any time, and share or print outputs. Organize reports, group them logically, and control user access for better visibility and governance.

AI Analyst

Strategic Use Cases

→ Operational Performance Analysis

Analyze utilization, throughput, turnaround times, and execution bottlenecks using regularly updated data across systems, without impacting live operations.

→ Financial & Margin Insight

Understand performance across revenue drivers with visibility into financial and operational data, enriched with context behind changing performance.

→ Executive Decision Support

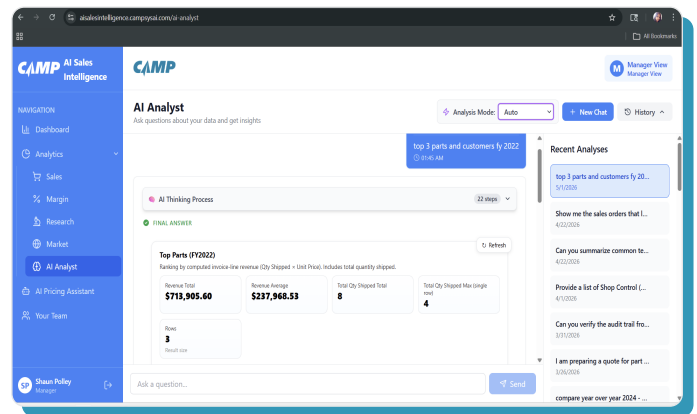

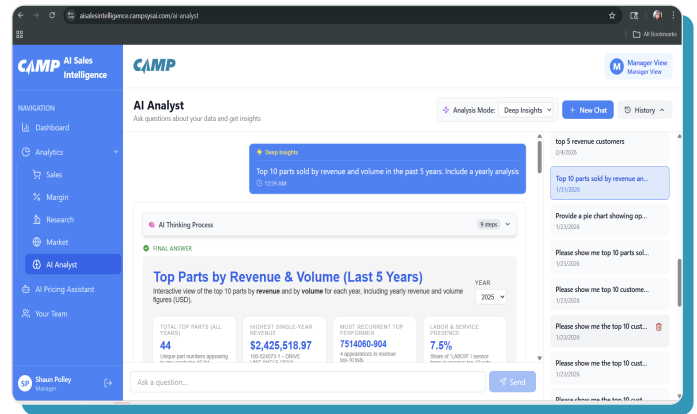

Move from question to answer faster with summarized findings, ranked priorities, and drill-down visibility across the business.

→ Cross-Functional Intelligence

Combine ERP, financial, operational, market, and document-based information to answer questions that span departments and systems.

→ Flexible Data Access & Integration

Query data using standard languages or connect preferred BI and data science tools, all on a secure, enterprise-scale foundation.
